VDI-APPLIANCE.COM

The Virtual Desktop Infrastructure (VDI) that does work!

50 to 300 virtual desktops on one VDI-Appliance with a 2 to 8 times better performance than traditional desktops. SAN storage is not required.

Need more virtual desktops? Simply add a VDI-Appliance.

IO is the single most important bottleneck of the traditional VDI architecture. Lots of central disk storage is required to realize acceptable IO performance. SAN storage is expensive, takes up space in your data center and consumes a lot of energy. VDI-Appliance from IOdis offers excellent IO performance thanks to its fast NAND flash technology that replaces disk storage. One VDI-Appliance easily accommodates up to 300 virtual desktops that are 2 to 8 times faster than traditional desktops. Additional VDI-Appliances can easily be added to accommodate more desktops. Simple management, scalability and the absence of SAN reduces cost of ownership up to 80% compared to traditional VDI solutions. VDI-Appliance combines very well with your existing infrastructure.

The benefits of VDI-Appliance:

Speed

2 to 8 times fast than a traditional desktop.

Low cost

From € 108,- per desktop.
No shared disk storage.

Sustainable

Only 4 Watts per virtual desktop.

Require more users?

Simply add a VDI-Appliance.

VDI-APPLIANCE.COM

Fast

The VDI-Appliance with its NAND Flash technology instead of traditional SAN storage guarantees users at least the speed of their physical desktop. Users may expect their virtual desktop to be even 2 to 8 times faster than their physical desktop.

Low cost

Hardware is integrated in one appliance that does not need expensive shared storage. It results in low investment expenses and cost of ownership. System management is simple as disk storage is only used to store data.

Sustainable

Proven server architecture in combination with fast NAND Flash technology make a high density of desktops per VDI-Appliance possible. A power consumption of only 4 Watts per virtual desktops gives VDI-Appliance its sustainability. Apart from the fans VDI-Appliance has no moving parts.

Simple management

Central management of the desktops in the data center results in a better security, simple system management, less vulnerability and low operational costs. The user gets the same look and feel. VDI-Appliance works well with all virtualisation software such as VMware View and Citrix XenDesktop.

Anywhere, any device

Organisations are more flexible and work more efficiently when people are mobile and have access to their data and applications anywhere with any device. VDI-Appliance helps make that possible.

In short...

Sustainable

Fast

Low cost
